**TOPIC:Team-Based Concept Association, Knowledge Competition and Collaborative Learning.**

**For the topic Cloud-Based Secure Document Management System with Continuous Security Monitoring, you can present the following under Team-Based Concept Association, Knowledge Competition, and Collaborative Learning.**

### **1. Team-Based Concept Association**

**Activity:** Create a concept map by connecting the main components of the system.

**Main Concept:**

Cloud-Based Secure Document Management System

**Associated Concepts:**

- Cloud Storage
- User Authentication
- Role-Based Access Control (RBAC)
- Document Encryption
- Secure File Upload & Download
- Continuous Security Monitoring
- Threat Detection
- Audit Logs
- Backup & Recovery
- Data Privacy & Compliance

**Outcome:**

Students understand how each component works together to provide secure document management.

### **2. Knowledge Competition**

**Activity:** Conduct a quiz or challenge among teams.

**Sample Questions:**

1. What is the purpose of document encryption?
2. Why is Role-Based Access Control (RBAC) important?
3. What does Continuous Security Monitoring detect?
4. Which cloud service stores documents securely?
5. What is the function of audit logs?
6. Name one cyber threat that security monitoring can detect.

7. Why are backups important in cloud storage?
8. What authentication method improves account security?

**Outcome:**

Enhances technical knowledge and encourages healthy competition.

**3. Collaborative Learning**

**Activity:** Divide students into groups, with each group responsible for one module.

**Team Responsibility**

Team 1 User Authentication & Login

Team 2 Secure Document Upload/Download

Team 3 Encryption & Access Control

Team 4 Continuous Security Monitoring

Team 5 Audit Logs & Backup Management

**Each team:**

- Explains its module.
- Demonstrates how it interacts with other modules.
- Discusses security challenges and solutions.
- Presents findings to the class.

**Outcome:**

- Improves teamwork and communication.
- Enhances understanding of cloud security concepts.
- Encourages collaborative problem-solving.
- Demonstrates how secure cloud systems are designed and monitored.

**Key Points**

- Securely stores documents in the cloud.
- Provides user authentication for secure access.
- Uses encryption to protect documents during storage and transmission.
- Implements Role-Based Access Control (RBAC) to restrict access based on user roles.
- Maintains audit logs to track all document activities.
- Continuously monitors the system for suspicious activities.
- Detects threats and generates real-time security alerts.
- Supports secure document upload, download, sharing, and version management.

- Ensures data backup and disaster recovery.
- Helps organizations comply with security and privacy standards.
- Improves collaboration while maintaining document security.
- Protects against unauthorized access, malware, and data breaches.
